Title: Palisade Fencing Cable Channel

Dear Barry,

BFH Sydcon were contracted to supply and install a high security Palisade fence around one of our 'Critical Infrastructure' assets. An access control system, which required extensive cabling, was added to the gates. This would normally have required trenching to house the cable conduits, however, thanks to BFH Sydcons unique design; the cables were able to be run in secure channels incorporated in the fence. These channels not only negated the need for costly trenching, they also proved to be extremely easy to use. Thanks to BFH Sydcons outstanding design, the cabling was installed in less than a day.

Regards

Drew Headland
